

SOFT3111 – INTERNET AND WEB PROGRAMMING

PROJECT PART 2

ISIK UNIVERSITY
COMPUTER
SCIENCE AND
ENGINEERING

November 25, 2024

PROJECT DESCRIPTION

In the second part of your project, you are required to submit screen mockups (use wireframe mockup program Balsamiq) for your website. Make sure that you cover all web pages that your different user types will encounter. Create crude designs of our screens. At this point we are not using any html, css, or any other real languages. We will only sketch the screens as we would like them to be. Any button, link, tab etc. should be designed as clickable (When we click the button, we should be navigated to the mockup for the related page).

Submit your document as a PDF file on Blackboard.

Note: This will be opened as a group project in Blackboard system, so only one person submits the project for everyone in the group. Everyone will get the same grade with a single submission unless there is a problem. If your teammate does not work with you on the project, notify Res. Assist. Gizem Gümüşçekiççi (<mailto:gizem.gumuscekicci@isikun.edu.tr>), so we can grade you separately.

DUE DATE

December 2, 2024 23:59 No extension.
